

JY-2000 System Installation Directions

Note: JY-2000 System Installation includes JY-2000 software installation and the Driver installation of Video & Sound Card, Alarm Card. If it is the 1st time installation, you must run JY-2000_SETUP.exe firstly, then install the Driver of Video & Sound Card.

一、JY-2000 software installation:

When enter into Win2000 if the system promote “found new hardware”, click “Cancel” (don’t install the driver program of it at this time), then operate as follows:

1. Find and run “JY-2000_SETUP.exe” in our Driver CD.
2. During the software installation it will spring out a Window as follows. If it is the 1st time install the software, please select “Install Driver”, (**each Four Channel Surveillance Card have four devices, so that the system should search and install 4 times drivers. If two pieces of Four Channel Surveillance Card, that should install 8 times drivers, and by analogy. Some Main Board that after installed one driver will promote Restart computer, don’t restart it till all the drives installed completely).**

- If it is the upgrade of software, make sure the driver of Video Card already installed then can skip “Install Driver”, and click “finished” directly.

3. After auto installed driver of Video & Sound Card, it will promote

“install finished”, then click “finish” to finish the whole software installation.

After finished installation of Video & Sound Card Driver, in the Device Manager window will have: “Saa713x pci Card WDM Driver”
(each Four Channel Video & Sound Card will have 4 devices of “Saa713x pci Card WDM Driver” in the Device Manager. If there have 4 pieces Card, then will have 16 devices of “Saa713x pci Card WDM Driver”).

4. If it is failed that the auto installation of Video & Sound Card Driver, then need manual installation.

The Driver Program is installed at: C:\WINNT\SYSTEM32 (saa713.inf, saa713.sys) .

Find the “Multimedia controller” of uninstalled Driver Program in the Device Manager, select “Reinstall Driver”, then follows the promote operation.

二、 Alarm Card Driver installation:

If the system has Alarm Card, then need to install its driver, The source file of Driver program already installed at: C:\WINNT\SYSTEM32 (Nm2kMf.inf, NmPar.sys).

1. Wait till Win2000 system find new hardware of “JY PCI Multi-I/O Controller、 JY Serial Port”, then click “ Next” to start install Driver Program.

(or find the “PCI Serial port” of Alarm Card device which uninstalled in the Device Manager and install its driver).

2. Acquiescence select “⊙search the matched Driver”, then click “Next” to start searching.

3. Choose the routes as “C:\WINNT\system32”, then click “YES”. The Driver will auto complete installation.

● If this description of the installation is still difficult to install offices, may request the installation of computer professionals.
