JY-2000 DVR System Operation Introduction

一、 System introduction:

1. 1 Summarize

JY-2000 digital video recorder system (software and hardware products) contains multiview display, hard disk recording, network image transmitting, PTZ control and alarm control functions which bases on Windows2000/xp and adopts MPEG-4 compressor technic. It is a high steady and reliable system Compared with similar products in the market, the features of our system are perfect function and conveient operation.

1. 2 System operating environment

- Operating system: Windows2000/xp

1. 3 Basic functin

◆ Image display:

D1 high resolution 704*576
Display parameter setting separately
Support image shielding
Capture image

◆ Recording:

Every channel 25 frame/s,with audio,support max to 24 channels
Recording quality have 3 optional levels and choose add audi.Support setting FPS
Recording manners:schedule recording,manual recording,motion detection and alarm linkage recording

Playback review:

Playback authority setting
Playback fast/slowly
Suppot capture image during the video, preview and print

PTZ control:

Achieve PTZ control with decoder
Support multidecoder protocol

Alarm control:

Motion detection alarm
Detector alarm
Auto record while alarm
Alarm output linkage

◆ Network transmission:

Support TCP/IP protocol, realize network transmission

Administer System security log:

Computer records all the operation for system maintenance and examining security.
